

Sensory Map

For finding less-crowded, quiet spaces
and relaxing areas

Welcome to the Art Institute of Chicago

We are committed to making our programs and services accessible to everyone. This Sensory Map can help you find sensory-friendly spaces in the museum. You can use it as a guide for finding places that offer tactile engagement and for finding spaces that are less brightly lit, quieter, and less crowded.

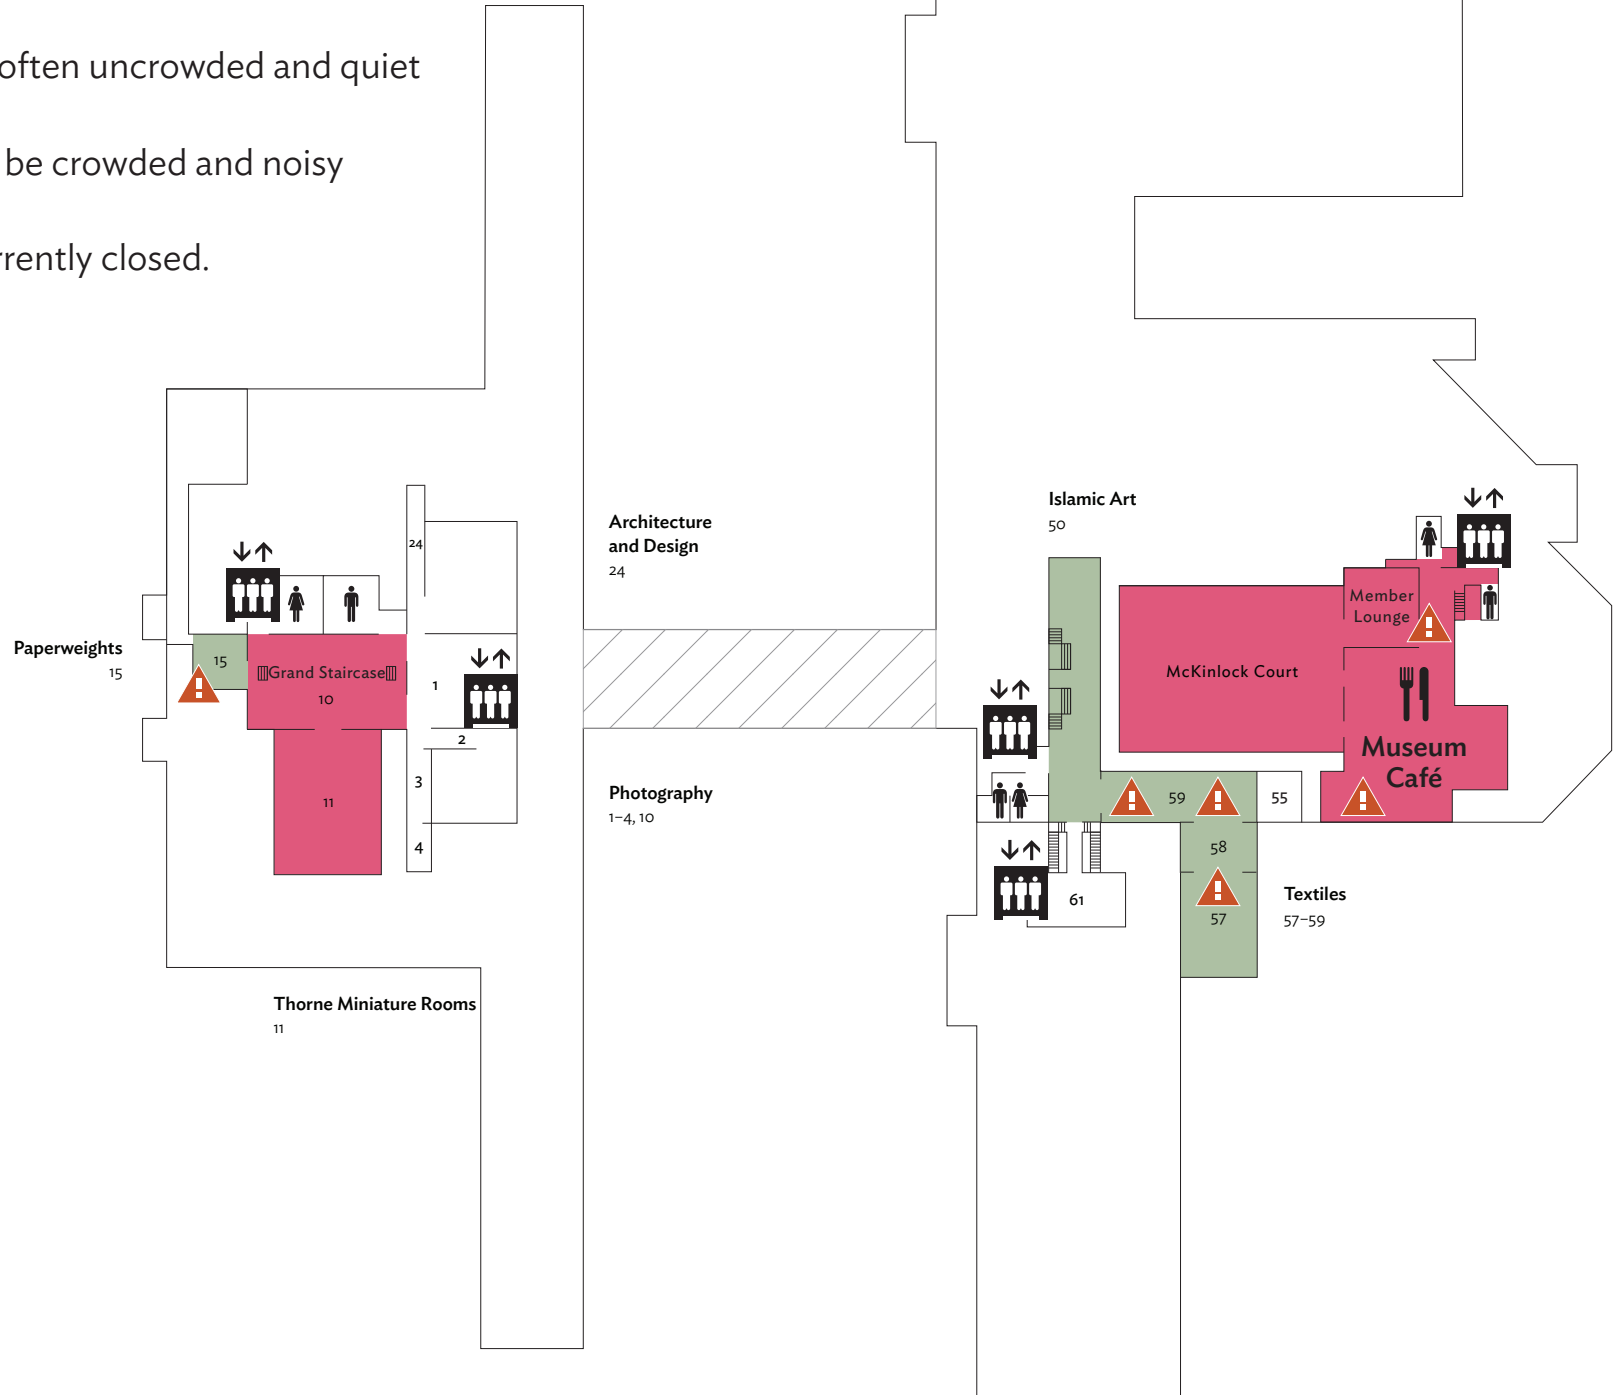

Please keep in mind that some spaces in the museum are dedicated to temporary exhibitions where the nature of the space might change. Some parts of this map may not always show the latest temporary changes.

Lower Level

 Spaces that are often uncrowded and quiet

 Spaces that can be crowded and noisy

 This space is currently closed.
